

- **INDPRO GEAR EP SERIES**
- **INDPRO SYNGEAR EP SERIES**

INDPRO GEAR EP SERIES are premium extreme pressure industrial gear oils formulated to provide outstanding wear and friction properties, improved oxidation stability, rust and corrosion protection plus exceptional anti-foaming resistance. They are available in ISO viscosity grades 68 to 680 and recommended for the lubrication of enclosed gear sets and splash systems operating under normal to severe conditions. They comply with these industry standards US Steel 224, David Brown SI.53.101 (E), AGMA 9005-D94 and DIN 51517 Part 3.

INDPRO SYNGEAR EP SERIES are fully synthetic based extreme pressure industrial gear oils formulated to provide outstanding performance in abnormally high and low temperatures plus under severe conditions of shock or heavy loads. They possess low internal friction characteristics which in turn deliver lower operating temperatures, reduced power consumption and improved gear efficiency. They are available in ISO viscosity grades 68 to 680 and recommended for the lubrication of enclosed gear sets and bearings where operating loads and/or bulk oil temperatures give unsatisfactory life for conventional gear oils. They comply with these industry standards US Steel 224, David Brown SI.53.101 (E), AGMA 9005-D94 and DIN 51517 Part 3.
