

- **NEEDLE OIL SERIES**

PDM NEEDLE OIL SERIES are premium quality, emulsifiable needle oils designed to meet the stringent requirements of most types of knitting machines employed in the textile industry. They possess excellent anti-wear properties to protect the needles, sinkers and cam mechanisms of circular knitting and hosiery machines. The low coefficient of friction value further enhances their anti-wear properties and will extend needle life. These oils will not stain and because of their excellent emulsifiable properties they can be easily washed off fabrics. They are available in 4 viscosity grades ISO VG 22, 32, 46 & 68 to cover a wide range of textile applications.
