

Logistics is a vital component of our supply chain operation and service to customers. Product, packaging and raw material inventory is managed and controlled by SAP compatible information software system.

Transport naturally is a key feature and our factory is conveniently located to service most of Thailand without passing through Bangkok. For exports we can reach Bangkok port within an hour's drive.

Our transport fleet consists of relatively small pickup vehicles to 15,000 litre bulk trucks and so is capable to servicing customers big and small. Shipping containers are carefully loaded at our factory for shipment to the many regional and international countries that we export to.
